

Global Economic Impact of War: Analysis & Insights

Analyzing GDP, Inflation, Unemployment, and Market Trends

TEAM NAME: KDC

Problem Statement

Wars create large-scale disruptions across global economies

Economic effects extend beyond conflict zones to global markets

Understanding these impacts is critical for policy and recovery planning

Objective:

To analyze how war affects GDP, inflation, unemployment, and financial markets across countries

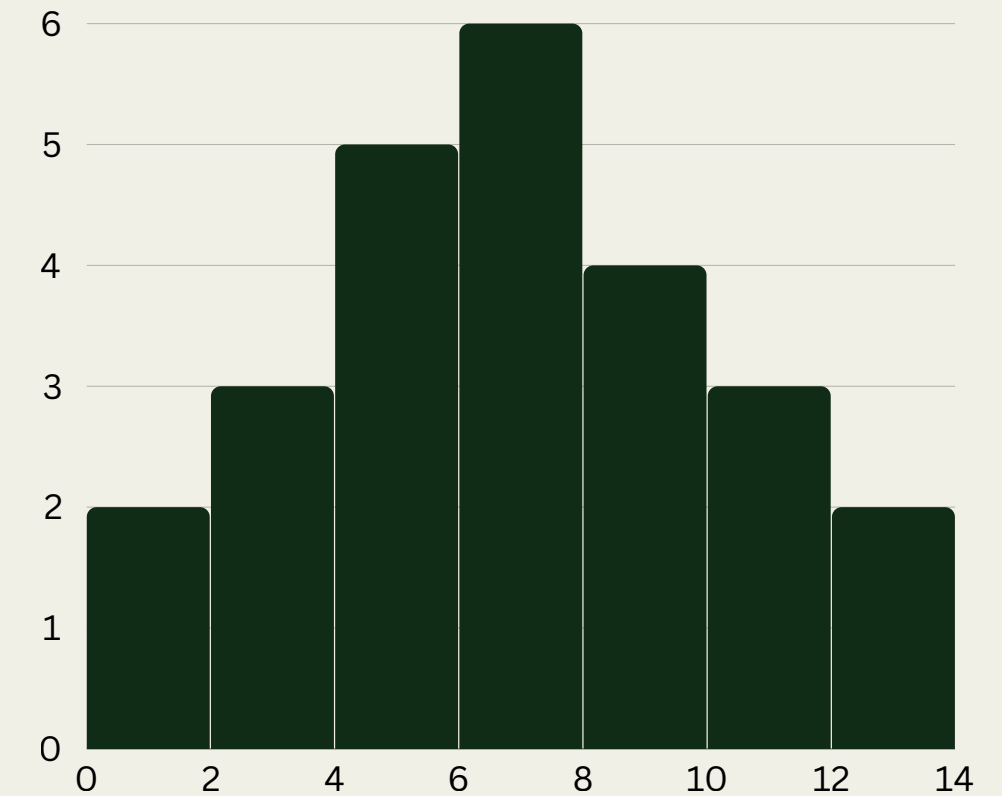

Data & Approach

- War economic dataset (GDP change, inflation, unemployment, war cost)
- Oil price data (economic shock indicator)
- Commodity price data (supply chain impact)
- Stock market indices (market reaction)

Approach:

Integrated analysis combining macroeconomic indicators with market trends to evaluate war impact

Global Economic Trends

- Oil price fluctuations act as early indicators of economic shocks
- Commodity prices show volatility due to supply disruptions
- Stock markets reflect uncertainty and economic instability

Insights

Economic shocks propagate across sectors, creating ripple effects in global markets

Economic Impact Across Countries

**GDP declines across
most countries during
war periods**

**Inflation rises
significantly,
increasing cost of
living**

**Unemployment
increases due to
disruption in
industries**

Key Insights

All countries experience economic contraction, with varying severity

Severe cases show extreme GDP decline (e.g., Palestine ~ -85%)

Impact levels range from moderate to severe across regions

CONCLUSION & RECOMMENDATIONS

Conclusion & Recommendations

- War leads to systemic economic decline across nations
- Economic effects are interconnected across GDP, inflation, and employment

Recommendations:

- Implement economic stabilization policies
- Control inflation through supply chain management
- Focus on employment recovery programs

Final Takeaway:

War creates long-term economic disruption requiring coordinated policy response
